## What's New in the AutoCAD?

Markup assist provides a similar, real-time benefit for more frequently used items such as labels, property lines, and dimensions. Rapidly change those objects, dynamically, directly in the drawing window without additional steps. (video: 1:07 min.) Smart cursors: Powerful, customizable cursors for auto-placing objects and selecting items in drawings. There are also several updates to the Project 2013 and MXD commandline tools: Automatic and near-synchronized project status. When you are in the middle of a project, you can see a summary of the status at the project level and at the drawing level. Projects can now be set to automatically synchronize their states on time, date, or both. Using the project name as a filter in the commandline, you can find project by name, location, or in an earlier date or time than your current project. Added a --version commandline option to show the current version of AutoCAD and the project name. More enhancements and a few bug fixes.
