Stores your frequently used information and easily unlocks it after a given amount of time. Privacy & Security System Locks your computer with a PIN code to avoid people from accessing the data on your computer. Decoy Allows for the decoy system to identify the computer. Type of Locks: PIN / Password / Security code Android tool to hide your PIN code. How it works? This tool enables you to hide or delete your PIN code to use it as a secret without telling anyone or sharing it with anyone. You don't need to worry about taking your phone with you to the bathroom or using it when you are traveling because you can set up a secret code to unlock your phone safely. In the Hidden PINs application, there are two options available: 1. Hide the PIN: In order to hide your PIN code, tap the "Hide PIN" and use it whenever you unlock your phone. Use it each time. In this case, there is no need for you to write your PIN code on your phone screen. 2. Delete the PIN: This option allows you to set up your new PIN code as the secret. Tap "Delete PIN." (If you've already hidden your PIN, you're also able to delete it using this option). Once you've chosen your option, tap "Done". When you return to the phone, the new PIN will be hidden from you. After you set your desired PIN, tap the lock icon on your phone screen or on any screen. (If you don't, your phone will show your old PIN). This tool is really effective. When you use this tool, the level of security is unmatched. With this secret code, your phone will not only protect your secret PIN code but also protect your private files on your phone. The Hidden PINs application helps you to hide or delete the PIN code that you use to unlock your Android. This application lets you easily hide your PIN to use it as a secret without telling anyone or sharing it with anyone. You can now use the application whenever you wish to unlock your phone. If you need to be extra careful with your phone you can create a secret PIN to use it. Once you set your desired PIN, it will become the only way to unlock your phone and it will protect you from others accessing your phone while you are traveling or when others enter your home. The present invention relates to a recording medium and a method for recording information thereon and more specifically to a recording medium on which a specific image information read with a scanner is recorded and a method for recording image information on the recording medium. A microfilm used in a library or the like is usually a roll-shaped record medium on which images or voice information are recorded in the form of a series of rectangular parallelepiped frames in a square shape. Among others, a microfilm (hereinafter referred to as a "strict square microfilm" when required) having a constant square shape throughout the entire microfilm is often used from the standpoint of convenience in handling and modification of the frame positions. In recent years, an image information read with an image scanner is recorded on this strict square microfilm in the form of a series of rectangular parallelepiped frames. As an information recording method of such a strict square microfilm, there has been proposed, for example, a method in which the strict square microfilm is placed on an image information read section of a scanner, and the scanner reads a specific image information from the strict square microfilm (see Japanese Examined Patent Publication No. 6-6533(1994)). In the former image information recording method using the strict square microfilm, however, the strict square microfilm is often required to be placed in the exact position (for example, at a position the same as the reading position of the microfilm by the scanner), on the optical path of the scanner
